

ABSTRACT

A substantially flexible, shape-sustaining article made by forming at least one sheet of flexible, substantially non-shape sustaining material having a holographic image or design on at least a portion thereof into the substantially flexible, shape-sustaining article such that the holographic image or design constitutes at least a portion of the decor of the article. The substantially flexible, shape-sustaining article is provided with a base having a closed lower end, an open upper end with an object opening extending therethrough and a decorative border extending outwardly from the open upper end of the base. The base of the article has a plurality of overlapping folds of which at least a portion are permanently connected so that the article may be substantially flattened and then unflattened to assume the original shape of the article.
